Physics

ASSISTANT PROFESSOR: Brian Gentry (chair) VISITING INSTRUCTOR: Zegnet Muhammed

"Look deeply into nature and you will understand everything better," said Albert Einstein. Students of physics at Hollins understand the truth of this maxim. Through their investigations of laws that underlie reality, they gain a greater appreciation not only of our universe but also their relationship to it.

In physics courses at Hollins, you will engage the ideas of Newton and Hamilton, Maxwell and Einstein, among many others. You will find that wrestling with tough questions and exploring the limits of what is known about the world is the physicist's stock-in-trade and that there is a joy in understanding nature that comes from truly seeing it for the first time.

Classes are intimate: upper-division classes typically have 3-4 students, and lower-division courses have 10-15. We place great value on nurturing each student's development as a physical thinker. In physics courses at Hollins, you'll find yourself challenged and closely supported and nurtured as you mature in your physical reasoning.

#### **REQUIREMENTS FOR A MINOR IN PHYSICS:**

5 courses and the corresponding laboratories (24–28 credits) from:

- PHYS 201, 201L: Analytical Physics I, Lab (4, 2)
- PHYS 202, 202L: Analytical Physics II, Lab (4, 2)
- PHYS 301: Classical Mechanics (4)
- PHYS 302: Electromagnetism (4)
- PHYS 310: Modern Physics (4)
- PHYS 325: Biological Physics (4)
- PHYS 331, 331L: Physical Chemistry I, Lab (4, 2)
- PHYS 332, 332L: Physical Chemistry II, Lab (4, 2)
- PHYS 335: Quantum Mechanics (4)

For all laboratories offered in the physics department, the corresponding lecture course is a corequisite or prerequisite.

Proficiency in mathematics is required for all physics major courses. Courses in statistics and computer science are highly recommended. The Short Term in the senior year is normally devoted to research in physics or a closely related field. Prerequisites for any course may be satisfied by examination.

A student with a score of 4 or 5 on the College Entrance Examination Board (CEEB) AP Physics C: Mechanics exam will receive four credits in physics (equivalent of PHYS 201). A student with a score of 4 or 5 on the AP Physics C: Electricity and Magnetism exam should consult with the department chair about potential course credit. A student with a score of 4 or 5 on the AP Physics I: Algebra-based exam will receive four credits in physics (equivalent of PHYS 151). A student with a score of 4 or 5 on the AP Physics 2: Algebra-based exam should consult with the department chair about potential course credit. Laboratory sections for these courses may need to be completed at Hollins.

Note: Hollins offers a minor in physics. The physics major is currently suspended, and students interested in the study of physics should contact the Associate Vice President for Student Success.

#### **COURSES IN PHYSICS:**

#### PHYS 101: INTRODUCTION TO ASTRONOMY (4)

Muhammed

A course in astronomy dealing with the physical principles and scientific investigation of objects in our solar system, galaxy, and universe. The course will emphasize the study of stars, star systems, cosmology, and relativity; and how knowledge is acquired of celestial objects to develop models of our universe. Will include observations of the night sky. Open to first-year students and the nonscientist. No prerequisite. Offered both terms. (SCI)

## PHYS 108: BASIC ELECTRONICS (4)

Department

A course that combines a lecture and lab approach. Basic electronic concepts, static electricity to solidstate electronics will be taught in lectures. Analog and digital circuit fundamentals will be emphasized in the laboratory sections. Open to first-year students. No prerequisite. Not offered in 2022-23. (SCI)

## PHYS 151: PHYSICAL PRINCIPLES I (4)

Muhammed

Noncalculus-based general physics with an emphasis on problem-solving, primarily intended for science and pre-medical students. Covers Newtonian mechanics, thermal physics, fluid physics, and wave motion. Open to first-year students. Prerequisite: Prerequisites: *q* and MATH 140 or a higher-level MATH course. Offered Term 1. (SCI: must take lab to fulfill SCI)

### PHYS 152: PHYSICAL PRINCIPLES II (4)

Department

Noncalculus-based general physics with an emphasis on problem-solving, primarily intended for science and pre-medical students. Topics include electricity, magnetism, DC/AC circuits, light and optics, and quantum physics. Open to first-year students. Prerequisite: PHYS 151. Offered Term 2. (SCI: must take lab to fulfill SCI)

## PHYS 151L, 152L: PHYSICAL PRINCIPLES I, II LAB (2, 2)

Muhammed, Department

Open to first-year students. Prerequisite: *q*. Corequisite: PHYS 151 or 152. PHYS151L offered Term 1. PHYS 152L offered Term 2. (*Q*, SCI)

# PHYS 197F: FIRST-YEAR SEMINAR - LASERS, NANOPARTICLES, AND MOLECULAR MEDICINE (4) Gentry

Have you ever wondered how MRIs and CT scans work? Would you like to learn about the emerging field of nanomedicine? Are you interested in the latest methods for detection and treatment of diseases like Alzheimer's and cancer? Would you like to investigate the emerging medical technologies that will transform the way medicine is practiced in the near future? Are you curious about new career options in fields related to biotechnology and medicine? In Lasers, Nanoparticles & Molecular Medicine, you will discover new medical technologies and treatment modalities that you find interesting and delve deeper into them. You will learn how to read medical research articles and understand the science behind them. You will also learn how to effectively communicate these findings to broad audiences. Open to first-year students only. Offered Term 1. Placement to be determined during the summer. (o, r)

## PHYS 201: ANALYTICAL PHYSICS I (4)

Gentry

A rigorous calculus-based introduction to classical mechanics, gravitation, thermal physics, fluid physics, and electricity and magnetism. Open to first-year students with advanced placement. Prerequisites: q and MATH 241 and 242 or test into MATH 255 but may be taken concurrently with permission. Offered Term 1. (SCI: must take lab to fulfill SCI)

#### PHYS 202: ANALYTICAL PHYSICS II (4)

Gentry

A rigorous calculus-based introduction to classical mechanics, gravitation, thermal physics, fluid physics, and electricity and magnetism. Open to first-year students with advanced placement. Prerequisites: PHYS 201. Offered Term 2. (SCI: must take lab to fulfill SCI)

## PHYS 201L, 202L: ANALYTICAL PHYSICS I, II LAB (2, 2)

Gentry

Open to first-year students with advanced placement. Prerequisite: *q*. Corequisite: PHYS 201 or 202. PHYS201L Offered Term 1. PHYS 202L offered Term 2. (*Q*, SCI)

# PHYS 225: ENERGY AND THE ENVIRONMENT (4)

Gentry

This course will examine the physics of energy, with a focus on human energy use and production and their effect on the environment. It will utilize the physical concepts of work, energy, and power, with applications from electricity and magnetism and thermodynamics, to provide an understanding of the challenges faced in implementing ecologically and economically sustainable energy. Not open to first years. Prerequisite: ES 117 or PHYS 151 or PHYS 201. Also listed as ES 225. Not offered in 2022-23.

## PHYS 236: WIND, WATER, AND WEATHER (4)

Gentry

This course examines the physical principles of earth's dynamic weather systems, utilizing important concepts from physics, geology, hydrology, and meteorology. Students will gain a broad understanding of interactions between the atmosphere and fresh and ocean water, including global circulation systems,

storms, weather forecasting, the carbon cycle, and the greenhouse effect. Special emphasis will be placed on human-induced climate change. Also listed as ES 236. Open to first-year students. Prerequisite: ES 117, PHYS 151, or PHYS 201, or permission of instructor. Not offered in 2022-23.

## PHYS 241: GEOLOGY AND EARTH HISTORY (4)

Gentry

Planet Earth's development as an integrated physical, chemical, and biological system over the past 4.6 billion years. Topics include: the origins of the solar system, Earth, and Moon; forces driving Earth's chemical and geological differentiation; plate tectonics; origins of life and humans; Earth's system dynamics; humans as geological agents; and Earth's climate system. Also listed as ES 241. Open to first-year students. Offered Term 2. (SCI)

## PHYS 290: INDEPENDENT STUDY (2 or 4)

**Department** 

Individual study, reading, and either experimental or theoretical investigation of a physics-related topic below the advanced level. Each course occupies one term and may be offered during the summer. Up to three courses in the sequence may be taken for credit.

#### PHYS 301: CLASSICAL MECHANICS (4)

Department

An extension of PHYS 201/202. Topics include Newton's Laws, the simple harmonic oscillator, the central force problem, multi-particle system (coupled oscillators), rotation of rigid bodies, mechanics of continuous media, and the mechanics of Lagrange and Hamilton. Prerequisite: PHYS 201. Not offered in 2022-23.

## PHYS 302: ELECTROMAGNETISM (4)

Department

Intermediate-level electricity, magnetism, and the Maxwell equations of the electromagnetic field. Topics include charged-particle trajectories, the theorems of Gauss and Stokes, vector calculus, Poynting vector, wave and polarization phenomena, and electromagnetic interactions with matter. Prerequisite: PHYS 202. Not offered in 2022-23.

#### PHYS 310: MODERN PHYSICS (4)

Gentry

Twentieth-century developments in physics: relativity theory, the nature of space and time, the equivalence of mass and energy, introductory quantum theory, the particle nature of light, the wave nature of electrons, atomic and molecular structure, and the structure of the nucleus. Prerequisites: PHYS 201 and PHYS 202. Offered Term 2.

#### PHYS 325: BIOLOGICAL PHYSICS (4)

Gentry

This course explores the physics of living matter with a focus on the physical biology of cells. Utilizing concepts from thermodynamics and hydrodynamics, it develops an understanding of statistical mechanics through an examination of Brownian motion, diffusion, free energy transductions, and nonequilibrium steady-states. Applications include cell membrane permeability, bacteria locomotion, vascular networks, and mechanochemical motors. Prerequisite: PHYS 201 and 202. Not offered in 2022-23.

# **PHYS 331, 332: PHYSICAL CHEMISTRY I, II (4, 4)**

Boiadjiev, Department

Also listed and described as CHEM 331, 332. PHYS 331 offered Term 1. PHYS 332 offered Term 2.

# PHYS 331L, 332L: PHYSICAL CHEMISTRY I, II LAB (2, 2)

**Boiadjiev**, Department

Also listed and described as CHEM 331L and 332L. PHYS 331L offered Term 2. PHYS 332L offered Term 2.

## PHYS 335: QUANTUM MECHANICS (4)

Department

A rigorous introduction to the principles of quantum mechanics. Solutions of the Schrödinger equation, harmonic oscillator, and hydrogen atom. Operator methods are introduced and used to compose both orbital angular momentum and spin. Various approximation schemes will be studied. Also listed as CHEM 335. Prerequisites: PHYS 310, MATH 255, and MATH 316 or the equivalents are advised as preparation. Not offered in 2022-23.

## PHYS 390: INDEPENDENT STUDY (2 or 4)

Department

Individual study, reading, and either experimental or theoretical investigation of a physics-related topic at the advanced level. Each course occupies one term and may be offered during the summer. Up to three courses in the sequence may be taken for credit.

## PHYS 399: INTERNSHIP (4)

May be proposed in any term.

## PHYS 470: PHYSICS RESEARCH SEMINAR (4)

Department

**Department** 

A participatory seminar course examining current research areas in physics. Required of senior physics majors; other junior and senior science majors may enroll with permission. All course members will present and defend their physics-related research. A critical term paper is required. Prerequisite: junior or senior standing.

# PHYS 480: SENIOR THESIS (4)

Department

A research paper of publication quality based upon research in physics, or a physics-related field, undertaken for one term plus Short Term during the senior year. Required of all senior physics majors.

## PHYS 490: SENIOR HONORS THESIS (4, 4)

Department

By invitation of the department. Application must be made with faculty prior to registration. Required both regular terms and Short Term.

The major in physics is currently suspended. New majors will not be accepted to the program during 2022-23. The following set of major requirements appears for reference purposes.

#### **REQUIREMENTS FOR A MAJOR IN PHYSICS:**

10 courses and their corresponding laboratories (48 credits)

- PHYS 201, 201L: Analytical Physics I, Lab (4, 2)
- PHYS 202, 202L: Analytical Physics II, Lab (4, 2)
- PHYS 301: Classical Mechanics (4)
- PHYS 302: Electromagnetism (4)
- PHYS 310: Modern Physics (4)
- PHYS 331, 331L: Physical Chemistry I, Lab (4, 2)
- PHYS 332, 332L: Physical Chemistry II, Lab (4, 2)
- PHYS 335: Quantum Mechanics (4)
- PHYS 470: Physics Research Seminar (4)
- PHYS 480: Senior Thesis (4) or PHYS 490: Senior Honors Thesis (4, 4)
